

Functional Art

Our shade sail systems are custom designed and engineered to withstand the harshest of conditions prevalent in many North American areas.

The most popular fabric used on commercial and residential shade structures is a UV stabilized HDPE (High Density Polyethylene) shade fabric, which is fire retardant with ratings ranging from NFPA 701 to CSFM Class A approval.

This incredible fabric will not fray, tear, rot or fade and is covered by a 10-year manufacturer's limited warranty against UV degradation. This means most structures should last a minimum of 15 to 20 years under normal conditions.

The Coolest Protection under the Sun

Architectural
Shade Sails Inc.

Architectural Shade Sails, Inc. is an innovative, dynamic and progressive company with a full service in-house design, fabrication and installation team. We are dedicated to producing the best quality, most esthetically looking shade products on the market.

We have supplied custom designed and manufactured shade structures to many commercial and residential projects within the United States of America as well

as overseas. We can fabricate sails to your specification, assist with design or offer a complete design/fabrication/installation package.

Our in-house design and fabrication team have an extensive background in sailboat sail design and fabrication as well as yacht rigging design and manufacture. A perfect combination for this type of tensile fabric shade product.

Combining this knowledge with today's tensile structure and fabric technology allows us to produce some of the most amazing, visually seductive and functional shade structures imaginable.

Commercial

Architectural Shade Sails' custom designed and manufactured shade sail systems are suitable for commercial and residential applications.

Commercial projects generally require extensive communication between the project architects, engineers, contractors and the client before a final decision is reached.

We have installed numerous exciting and complex shade structures throughout North America since commencement in 1997. All of our custom products are made in Southern California under strict quality control where only the best materials are used in our custom shade structures.

Custom made shade sails are available in a variety of fabrics, shapes, sizes and colors and screen up to 98% of the sun's harmful UV rays and give 95% shade protection.

Residential

Our residential custom shade structures provide a cool, comfortable, protective environment for any residential project while adding a unique appearance and value to your property.

Our goal is to provide our clients with fabric tension structures that are not only functional but also add an exciting visual element.

An element that either enhances a project with a beautiful, artistic visual impact or one that blends in with the surrounding structure or landscape with little or no visual impact.
